

Steps to install compiler version 5 on Keil IDE 5.37.

Followed form: <https://developer.arm.com/documentation/ka005073/latest>

Step 1: Install Latest Keil (v5.37) (<https://www.keil.com/demo/eval/arm.htm>).

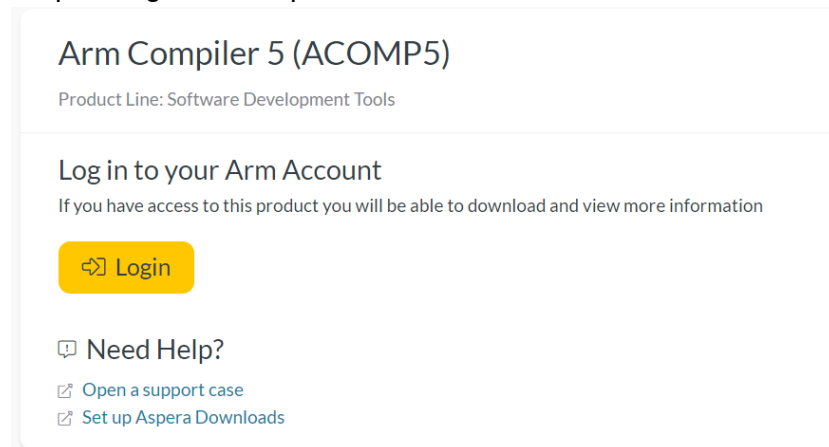

Step 2: Install MDK v5.25 legacy support (<https://www2.keil.com/mdk5/legacy>).

Step 3: <https://developer.arm.com/documentation/ka005198/latest>

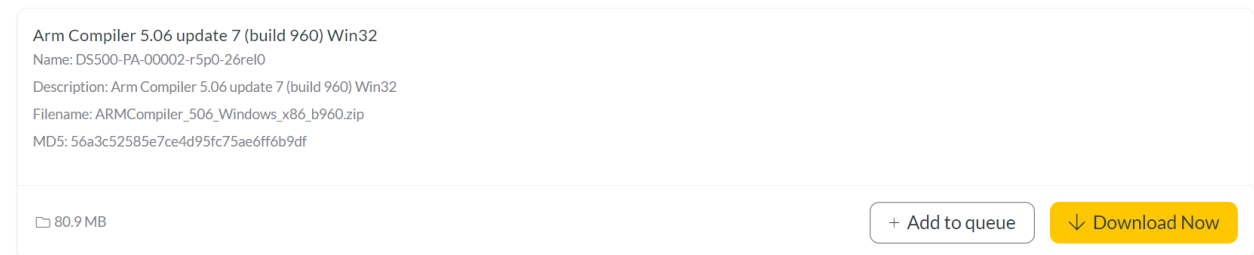

Download “ARM Compiler 5/06 update 7 (build 960).”

Step 4: Login or set up an account.

Step 5: Use your phone number and get a code. Download the compiler for windows.

Step 6: Unzip and install the compiler. Use the given installation path
“C:\Keil_v5\ARM\ARM_Compiler_5.06u7”.

You may have to create a folder “ARM_Compiler_5.06u7” inside the “ARM” repository.

Step 7: Open your project and go to “manage project”

Step 8: follow the steps given in the link to add compiler v5 to your project.

<https://developer.arm.com/documentation/101407/0537/Creating-Applications/Tips-and-Tricks/Manage-Arm-Compiler-Versions>

Installation of Keil IDE 5.35.

Labs are built on uVision 5.35

(<https://www.keil.com/fid/bokay3wyie9j1wly5ew16ogew1xb1dgwwicgd1/files/eval/mdk535.exe>)

If you install 5.35 then you don't need to try any steps from 1 to 8.

If you need further help to setup 5.35, please refer.
